“The main actor in this tale is **wood**, a living material that often falls victim to humanity’s desire to put trade and the market economy before nature.”

1000 legni was conceived as an easy-to-consult collection of woods from around the world, with samples scanned directly from original sections. Gianni Cantarutti is the globe-trotting wood expert who has put together this handy square-format book to convey, in images taken from his xylotheque, all the emotions that this quintessentially natural material evokes.

Printed on FSC-certified, low environmental impact, paper and unique of its kind, 1000 legni classifies woods by their eco-compatibility, quality and provenance, using three traffic-light signals (red, yellow and green) that indicate possible uses. This original, accessible book is dedicated to wood experts, architects, ecologists, lovers of elegant books, the curious and anyone concerned about nature and the environment.
